1956 MAY 30 PM 2 18

P WPA111 CGN PD=WUX WASHINGTON DC 30 1015AME=

DR EUGENE FARLEY, PRESIDENT=

WILKES COLLEGE WILKESBARRE PENN=

I AM GLAD TO KNOW THAT ON JUNE FOURTH THE COLLEGE WILL DEDICATE A NEW SCIENCE BUILDING IN HONOR OF MY GOOD FRIEND OF MANY YEARS, ADMIRAL HAROLD R. STARK. PLEASE EXTEND MY WARM GREETINGS TO ALL WHO JOIN IN THE SALUTE, AND CONVEY TO HIM MY WARM PERSONAL REGARDS=

DWIGHT D EISENHOWER=

B Y W E S T E R N U N I O N

The text of the telegram from President Eisenhower to Wilkes College and Admiral Harold R. Stark appears above. The occasion for the message from the chief executive was the ground breaking ceremony for the Harold Stark Science Hall held yesterday afternoon on the Wilkes campus. Work on the \$900,000, 47,000 square-foot structure is expected to begin shortly.

STARK

(Continued from Page 13)

the seniors for having established a class memorial fund, a means of aiding the college after graduating and gave high praise to Dr. Eugene S. Farley, Gilbert S. McClintock, Dr. Arnaud C. Marts, the trustees and faculty for "a job well done in helping Wilkes to grow strong."

An overflow crowd watched Dr. Farley present diplomas to the graduates. A number of special awards were also made.

Helen M. Krachenfels, Forty Fort, was named outstanding graduate of the year and was presented the award by Donald L. Honeywell, president of the Wilkes Alumni Association.

James Francis Riordan, Jr., Mocaqua evening school student, was recipient of Dobson Medal in Accounting and Monroe H. Firestone, Scranton, was winner of Pennsylvania Institute of Certified Public Accountants Award. Both presentations were made by Dr. Samuel A. Rosenberg, chairman of the department of commerce and finance.

Voris B. Hall, chairman of the chemistry department, presented the engineering award to Donald Hilton Covey, while Catherine H. Bone made the chemistry award in duplicate to Donald S. Berns, an August graduate, and Sheldon H. Isaac, Luzerne.

Invocation was asked by Msgr. Francis A. Costello and benediction was given by Rev. Dr. Norman W. Clemens.

A dance and reception for the graduates was given by the alumni at American Legion

Home, North River Street, following graduation.

Eisenhower Praises Wilkes on Building

President Eisenhower yesterday added his greetings to those already congratulating Wilkes College on the ground-breaking for its new \$900,000 science building, to be named in honor of former Chief of Naval Operations Harold R. Stark.

Eisenhower's greetings came in the form of a telegram read yesterday afternoon at the ground-breaking by Wilkes president Eugene S. Farley. Text of the telegram is reproduced elsewhere in today's Record.

Announcement of the President's congratulations came immediately before an address by Dr. Marts, vice chairman of Wilkes trustees and former president of Bucknell University.

Paying tribute to Admiral Stark in his address, Marts cited the Admiral as "the man who put the college in business," referring to the Admiral's early interest in Wilkes, and his donation of Chase Hall, the college administration building.

So well, Marts continued, have the men behind the college, with the Admiral, striven in their endeavors to build upon the foundation laid at the time, that since the establishment of the college, more than 7,000 young people have not, as might otherwise have happened, had their educations ended arbitrarily.

Holding aloft the pick and shovel to be used in the ground-breaking, Marts called attention to the fact that these tools, traditional symbols of the anthracite area, would be used to prepare the way for the unearthing of new treasures, treasures of the mind, not of the mine, and of immeasurably more value.

Admiral Stark responded briefly to Marts's remarks, reiterating his continued interest in the area of his birth.

"My heart has always been here," declared the Admiral, "although I've spent over 50 years away from here."

The ground-breaking followed Stark's reply, with Stark, Dr. Farley, and Trustee Board Chairman Gilbert S. McClintock turning the first spadefuls.

Echoing President Eisenhower's greetings came telegrams from former naval associates of Admiral Stark. Congratulations came from Vice Admiral C. Charles Wellborn, Jr., commanding U. S. Second Fleet; Rear Admiral William R. Smedberg of U. S. Naval Academy, and Admiral Ben Moreell, CEC-USN, retired.

Wired Admiral Wellborn, in part:

"Please accept my heartiest congratulations... It is most appropriate that the contribution you as Chief of the Bureau of Ordnance and Chief of Naval Operations made to the nation's technical and scientific development should be so recognized."

Excerpts from the Rear Admiral Smedberg telegram read:

"Nothing in my opinion could be more fitting than a science building to be named for Admiral Harold R. Stark. ... As the United States Navy advances into the nuclear age and a new vista of sea power such as the world had never known becomes apparent, I consider it most appropriate that a building named in honor of Admiral Stark should be a hall of science..."

And Admiral Moreell's telegram declared: "This is a worthy tribute to a distinguished naval officer who devoted his life to the service of his country..."

Wilkes Academic Procession Starts

Procession of administration, faculty and graduates of 1956 at Wilkes College began slowly to make its way from the main Wilkes campus to the college gymnasium a block away promptly at 7:50 last night to arrive at the gym promptly at 8. Heading the traditional procession is Dr. Charles B. Reif, chairman of the biology department, while members of the

administration and faculty follow in that order, in turn followed by 170 graduates who received degrees in person last night.

The seniors heard an address by Admiral Harold R. Stark and were graduated before an overflow crowd of parents and friends.

(Photos By Dan Gawlas)

Dr. Eugene S. Farley, president of Wilkes College, sinks a pick into the ground signifying the start of work on the Harold Stark Science Hall named in honor of Admiral Harold R. Stark, city native and naval figure.

The ground-breaking ceremonies took place yesterday afternoon. Shown left to right in the actual ground-breaking are Reuben H. Levy, Andrew J. Sordani, Jr., Dr. Farley, Admiral Stark, and Gilbert S. McClintock, chairman of the board of trustees of the college.

Admiral Stark stated at the ceremonies "My heart has always been here in Wyoming Valley." He and the college received several congratulatory messages, among them a telegram from President Eisenhower, for the occasion.

Wilkes Class Told Future Is in Brains

**Adm. Harold Stark
Principal Speaker
At Commencement**

"Today well-lived makes every yesterday a dream of happiness and every tomorrow a vision of hope" were the words by Admiral Harold R. Stark left with graduates of Wilkes College last night at the ninth annual commencement at the college gymnasium.

Admiral Stark, Wilkes-Barre native, Wilkes trustee and former Chief of Naval Operations, was the principal speaker at the graduation exercises at which 187 students received bachelor's degrees.

Them of his address "Wyoming Valley, Past, Present and Future" was employed in a manner to show the graduates they must have vision, courage and faith if they are to succeed in the lives ahead.

ADM. HAROLD STARK

Using Greater Wilkes-Barre area's struggle for economic rehabilitation as an example, the retired naval figure cited reasons why education plays such a tremendous part in the success of lives, nations and the world.

He said, "We, in our generation in America, are living on brains, educated brains. The next and the following generations will enjoy even greater prosperity and abundance because of the education our colleges and universities are giving."

He called increasing research "the seed-corn of America's future economy," Admiral Stark continued, by asking, "Who is doing all this research? Who are these men and women whose brains are creating tomorrow's industry? They are the college boys and girls of yesterday."

But he warned that in spite of all our strides, we are still like children paddling along the shore of a great ocean of knowledge. "More and more must be trained by our colleges and some day we will inherit the well-being which God intended for His children on earth."

In discussing the history of Wyoming Valley directly, Admiral Stark pointed to the strides being made here today. He used figures to back his statement "that our community leaders are succeeding in their attempt to create a new economic base upon which to build the future."

"Quietly and without fanfare," he opined, "this community is being changed from a mining to an industrial center." He further pointed out the success thus far in the area's drive to get back on its feet shows plainly "what men and women of this area can do if everybody puts his shoulder to the grindstone." Then he lauded the Chamber of Commerce, Industrial Fund, Wilkes College and all other agencies which have worked toward a common goal.

"Like a ship, we all go down together," he warned and added, "In the Navy it's what we call an 'all hands' job."

Admiral Stark outlined four points which the job requires:

"Encourage research that will develop new uses for our greatest natural resources—coal. Develop a plan of cooperation for existing industries to assure their continued success and growth. Create conditions that will attract new industries. Cultivate a high morale and community spirit."

DAILY THOUGHT

Let us not burden our remembrances with a heaviness that's gone.—Shakespeare

Social Security Growth

Expansion of Social Security has been phenomenal. The Commerce Clearing House reported on May 22 that benefits had risen almost 80-fold during the last 15 years. They are now running \$415 million a month and are expected to increase astronomically as more workers retire and as the Social Security Act is further liberalized by Congress.

Scheduled for discussion at Washington today, Wednesday and Thursday at a Federal-state conference on problems of older persons are bills to create a permanent Bureau of Older Persons in the Federal government, now pending in both houses of Congress. The conference is expected to endorse the bill. Even as the conference meets, the Senate is expected to take up the House-passed Social Security Act amendments offering additional benefits to the aged.

In the background is posed for Congress and the public the question of practical limits of Social Security. The measure now pending in the upper house to expand benefits is less liberal than the one passed by the lower body last year, but amendments to make it more liberal will be offered from the floor.

The Finance Committee's revision of the House-passed bill would limit the lower retirement age to widows and would abandon a House provision to make permanently disabled workers eligible for Social Security benefits at age 50. Lowering the retirement age for women to 62, as provided in the House bill, is opposed by Marion H. Folsom, Secretary of the Department of Health, Education and Welfare, who told the Senate Finance Committee in March that women are living and working longer than ever before. The lower retirement age, Folsom said, would go against current trends; more emphasis should be placed on rehabilitation and re-employment.

Commemorative P

Heads of some of the Latin American republics have been shown hesitation about attending the Inter-American Organization of American States Council at Panama City June 10-14. The council promises to write an important chapter in the long and dramatic history of Pan-America.

When President Eisenhower's heads of Latin American republics gather at the meeting, they will be commemorating the 130th anniversary of the Congress of Panama 1826 by Simon Bolivar.

The 21-nation OAS council will hold its first session at exactly 11 a.m. June 22. That was when the Congress of Panama began in 1826. Each day a different head of state or ambassador will speak at sessions and June 23. On Sunday, June 24, the council will adjourn.

Tito And Military Aid

Inevitably, in the light of the visit of President Marshal Tito of Yugoslavia to Moscow, the United States will consider whether military aid to Tito should be discontinued. The prospect is heightened by the circumstance that the House Foreign Affairs Committee is presently considering the foreign aid authorization bill and has already approved heavy slashes.

Representative John M. Vorys, Republican, of Ohio, predicted this week that Tito's statements in Moscow will lead to strong attempts in the House to cut Yugoslavia entirely out of the bill. This statement followed reports from Moscow quoting Tito as saying the Communist nations will never again be split as they were when the Kremlin thrust Tito aside in 1948.

How much window dressing there is by both sides, with Tito having waited for a year to return the call paid on him by Bulganin and Khrushchev, is a fair question. When they came to Belgrade Airport at the end of May in 1955, Tito then seemed none too happy about the visit. While he went to the airport to greet the visitors, he made no reply to a fulsome speech launched by Khrushchev.

In the succeeding year the new Soviet leaders by many sensational moves and statements repudiated Stalin's one-man rule and gave other evidences of a change of heart in party councils. Now as Tito receives an apparently cordial welcome, the campaign by Communist Party Chief Khrushchev against Stalin's policies is redoubled through the release of a complete text of a secret speech made by the Russian chief debunking Stalin as a man afraid, capricious, irritable, brutal and responsible for murders and tortures.

A leading question today is whether Tito will succumb to Soviet blandishment on this visit to Russia or whether in essence he will maintain Yugoslavia's unique position of a Communist neutral between Soviet Russia and the West. Hinged on this more than on anything else is the question of United States aid to Yugoslavia.

Dim Star Ahead

The first artificial earth satellite will appear in the sky as a fast-moving, sixth magnitude star, barely visible to the naked eye but easily seen with ordinary field glasses under the right conditions.

These calculations were made by a Navy scientist, Dr. Homer Newell, on the basis of the Pentagon's announcement that the first man-made "moon" will be a bright metallic sphere 20 1/2 inches in diameter.

Newell explained that information is now sufficient for exact calculation of the amount of light the object will shed on earth. In order to be as bright as a first magnitude star, it would have to be 16 feet in diameter.

The Once Over

By H. I. PHILLIPS

White House Conversation Piece

President.—Well, what's the cold war situation this morning?

Aide.—It's still complicated by the fact we just got another invitation from Russia.

President.—That's the third show of extreme politeness this month. It looks like Moscow is waging an all-out invitation battle. What do you think of the American defense against it?

Aide.—I feel our public warning system needs to be changed . . . maybe three long blasts whenever Bulganin and Khrushchev launch a new "hospitality-rocket," and two blasts to denote all clear when they turn back to their denunciatory routine.

President.—The most dangerous Russian weapon may be "the guided epistle." There are indications America is being overinvited in this mood of transeontinental affability. First Moscow asked us to send our top airmen to review the Russian air fleet. Next they suggest an exchange visit of battleships. What's it all mean?

Aide.—You know what Churchill said about an enigma wrapped in a riddle.

President.—What complicates matters is that this enigma and riddle are wrapped in an RSVP.

Aide.—We've accepted the invitation to the Kremlin air show. But I still think the picture of American notables traipsing to Moscow like visiting firemen and brother Elks is confusing to the neutral world.

President.—It plays into the hands of the Soviets as they offset the long record of low punches by presenting a picture of high respectability, with our help.

Aide.—We've got to get accustomed, perhaps, to abuse and hostility one minute and sweetness and light the next. It's amazing how easily Moscow can switch from Lenin and Marx to Emily Post and her Book of Etiquette.

DAILY THOUGHT

Let us not burden our remembrances with a heaviness that's gone.—
Shakespeare

Social Security Growth

Expansion of Social Security has been phenomenal. The Commerce Clearing House reported on May 22 that benefits had risen almost 80-fold during the last 15 years. They are now running \$415 million a month and are expected to increase astronomically as more workers retire and as the Social Security Act is further liberalized by Congress.

Scheduled for discussion at Washington today, Wednesday and Thursday at a Federal-state conference on problems of older persons are bills to create a permanent Bureau of Older Persons in the Federal government, now pending in both houses of Congress. The conference is expected to endorse the bill. Even as the conference meets, the Senate is expected to take up the House-passed Social Security Act amendments offering additional benefits to the aged.

In the background is posed for Congress and the public the question of practical limits of Social Security. The measure now pending in the upper house to expand benefits is less liberal than the one passed by the lower body last year, but amendments to make it more liberal will be offered from the floor.

The Finance Committee's revision of the House-passed bill would limit the lower retirement age to widows and would abandon a House provision to make permanently disabled workers eligible for Social Security benefits at age 50. Lowering the retirement age for women to 62, as provided in the House bill, is opposed by Marion H. Folsom, Secretary of the Department of Health, Education and Welfare, who told the Senate Finance Committee in March that women are living and working longer than ever before. The lower retirement age, Folsom said, would go against current trends; more emphasis should be placed on rehabilitation and re-employment.

Commemorative P

Heads of some of the Latin American republics have been shown with hesitation about attending the Inter-American Organization of American States council at Panama City June 12-15. The council promises to write an important chapter in the long and dramatic history of Pan-America.

When President Eisenhower's heads of Latin American republics gathered at the meeting, the commemoration of the 130th anniversary of the Congress of Panama 1826 by Simon Bolivar.

The 21-nation OAS council will hold its first session at exactly 11 a.m. June 22. That was when the council of Panama began in 1826. Each ambassador will speak at sessions on June 22 and June 23. On Sunday, June 24, presidents will arrive. On Monday, June 25, the government of Panama, at the invitation of the various civic events. On June 26, the OAS council will honor the heads of American republics at this important event. The president of the United States and one other president, chosen

should be discontinued. The prospect is heightened by the circumstance that the House Foreign Affairs Committee is presently considering the foreign aid authorization bill and has already approved heavy slashes.

Representative John M. Vorys, Republican, of Ohio, predicted this week that Tito's statements in Moscow will lead to strong attempts in the House to cut Yugoslavia entirely out of the bill. This statement followed reports from Moscow quoting Tito as saying the Communist nations will never again be split as they were when the Kremlin thrust Tito aside in 1948.

How much window dressing there is by both sides, with Tito having waited for a year to return the call paid on him by Bulganin and Khrushchev, is a fair question. When they came to Belgrade Airport at the end of May in 1955, Tito then seemed none too happy about the visit. While he went to the airport to greet the visitors, he made no reply to a fulsome speech launched by Khrushchev.

In the succeeding year the new Soviet leaders by many sensational moves and statements repudiated Stalin's one-man rule and gave other evidences of a change of heart in party councils. Now as Tito receives an apparently cordial welcome, the campaign by Communist Party Chief Khrushchev against Stalin's policies is redoubled through the release of a complete text of a secret speech made by the Russian chief debunking Stalin as a man afraid, capricious, irritable, brutal and responsible for murders and tortures.

A leading question today is whether Tito will succumb to Soviet blandishment on this visit to Russia or whether in essence he will maintain Yugoslavia's unique position of a Communist neutral between Soviet Russia and the West. Hinged on this more than on anything else is the question of United States aid to Yugoslavia.

Dim Star Ahead

The first artificial earth satellite will appear in the sky as a fast-moving, sixth magnitude star, barely visible to the naked eye but easily seen with ordinary field glasses under the right conditions.

These calculations were made by a Navy scientist, Dr. Homer Newell, on the basis of the Pentagon's announcement that the first man-made "moon" will be a bright metallic sphere 20 1/2 inches in diameter.

Newell explained that information is now sufficient for exact calculation of the amount of light the object will shed on earth. In order to be as bright as a first magnitude star, it would have to be 16 feet in diameter.

PRESIDENT SENDS STARK GREETINGS

PA118

1956 MAY 30 PM 2 18

P WPA111 CGN PD=WUX WASHINGTON DC 30 1015AME=

DR EUGENE FARLEY, PRESIDENT=

WILKES COLLEGE WILKESBARRE PENN=

I AM GLAD TO KNOW THAT ON JUNE FOURTH THE COLLEGE WILL DEDICATE A NEW SCIENCE BUILDING IN HONOR OF MY GOOD FRIEND OF MANY YEARS, ADMIRAL HAROLD R. STARK. PLEASE EXTEND MY WARM GREETINGS TO ALL WHO JOIN IN THE SALUTE, AND CONVEY TO HIM MY WARM PERSONAL REGARDS=

DWIGHT D EISENHOWER=

B Y W E S T E R N U N I O N

The text of the telegram from President Eisenhower to Wilkes College and Admiral Harold R. Stark appears above. The occasion for the message from the chief executive was the ground breaking ceremony for the Harold Stark Science Hall held yesterday afternoon on the Wilkes campus. Work on the \$900,000, 47,000 square-foot structure is expected to begin shortly.

STARK

(Continued from Page 13)

the seniors for having established a class memorial fund, a means of aiding the college after graduating and gave high praise to Dr. Eugene S. Farley, Gilbert S. McClintock, Dr. Arnaud C. Marts, the trustees and faculty for "a job well done in helping Wilkes to grow strong."

An overflow crowd watched Dr. Farley present diplomas to the graduates. A number of special awards were also made.

Helen M. Krachenfels, Forty Fort, was named outstanding graduate of the year and was presented the award by Donald L. Honeywell, president of the Wilkes Alumni Association.

James Francis Riordan, Jr., Micanqua evening school student, was recipient of Dobson Medal in Accounting and Monroe H. Firestone, Scranton, was winner of Pennsylvania Institute of Certified Public Accountants Award. Both presentations were made by Dr. Samuel A. Rosenberg, chairman of the department of commerce and finance.

Voris B. Hall, chairman of the chemistry department, presented the engineering award to Donald Hilton Covey, while Catherine H. Bone made the chemistry award in duplicate to Donald S. Berns, an August graduate, and Sheldon H. Isaac, Luzerne.

Invocation was asked by Msgr. Francis A. Costello and benediction was given by Rev. Dr. Norman W. Clemens.

A dance and reception for the graduates was given by the alumni at American Legion

Home, North River Street, following graduation.

Eisenhower Praises Wilkes on Building

President Eisenhower yesterday added his greetings to those already congratulating Wilkes College on the ground-breaking for its new \$900,000 science building, to be named in honor of former Chief of Naval Operations Harold R. Stark.

Eisenhower's greetings came in the form of a telegram read yesterday afternoon at the ground-breaking by Wilkes president Eugene S. Farley. Text of the telegram is reproduced elsewhere in today's Record.

Announcement of the President's congratulations came immediately before an address by Dr. Marts, vice chairman of Wilkes trustees and former president of Bucknell University.

Paying tribute to Admiral Stark in his address, Marts cited the Admiral as "the man who put the college in business," referring to the Admiral's early interest in Wilkes, and his donation of Chase Hall, the college administration building.

So well, Marts continued, have the men behind the college, with the Admiral, striven in their endeavors to build upon the foundation laid at the time, that since the establishment of the college, more than 7,000 young people have not, as might otherwise have happened, had their educations ended arbitrarily.

Holding aloft the pick and shovel to be used in the ground-breaking, Marts called attention to the fact that these tools, traditional symbols of the anthracite area, would be used to prepare the way for the unearthing of new treasures, treasures of the mind, not of the mine, and of immeasurably more value.

Admiral Stark responded briefly to Marts's remarks, reiterating his continued interest in the area of his birth.

"My heart has always been here," declared the Admiral, "although I've spent over 50 years away from here."

The ground-breaking followed Stark's reply, with Stark, Dr. Farley, and Trustee Board Chairman Gilbert S. McClintock turning the first spadefuls.

Echoing President Eisenhower's greetings came telegrams from former naval associates of Admiral Stark. Congratulations came from Vice Admiral C. Charles Wellborn, Jr., commanding U. S. Second Fleet; Rear Admiral William R. Smedberg of U. S. Naval Academy, and Admiral Ben Moreell, CEC-USN, retired.

Wired Admiral Wellborn, in part:

"Please accept my heartiest congratulations... It is most appropriate that the contribution you as Chief of the Bureau of Ordnance and Chief of Naval Operations made to the nation's technical and scientific development should be so recognized..."

Excerpts from the Rear Admiral Smedberg telegram read:

"Nothing in my opinion could be more fitting than a science building to be named for Admiral Harold R. Stark... As the United States Navy advances into the nuclear age and a new vista of sea power such as the world had never known becomes apparent, I consider it most appropriate that a building named in honor of Admiral Stark should be a hall of science..."

And Admiral Moreell's telegram declared: "This is a worthy tribute to a distinguished naval officer who devoted his life to the service of his country..."

Wilkes Academic Procession Starts

Procession of administration, faculty and graduates of 1956 at Wilkes College began slowly to make its way from the main Wilkes campus to the college gymnasium a block away promptly at 7:50 last night to arrive at the gym promptly at 8. Heading the traditional procession is Dr. Charles B. Reif, chairman of the biology department, while members of the

administration and faculty follow in that order, in turn followed by 170 graduates who received degrees in person last night.

The seniors heard an address by Admiral Harold R. Stark and were graduated before an overflow crowd of parents and friends.

(Photos By Dan Gawlas)

Dr. Eugene S. Farley, president of Wilkes College, sinks a pick into the ground signifying the start of work on the Harold Stark Science Hall named in honor of Admiral Harold R. Stark, city native and naval figure.

The ground-breaking ceremonies took place yesterday afternoon. Shown left to right in the actual ground-breaking are Reuben H. Levy, Andrew J. Sordani, Jr., Dr. Farley, Admiral Stark, and Gilbert S. McClintock, chairman of the board of trustees of the college.

Admiral Stark stated at the ceremonies "My heart has always been here in Wyoming Valley." He and the college received several congratulatory messages, among them a telegram from President Eisenhower, for the occasion.

Wilkes Class Told Future Is in Brains

**Adm. Harold Stark
Principal Speaker
At Commencement**

"Today well-lived makes every yesterday a dream of happiness and every tomorrow a vision of hope" were the words by Admiral Harold R. Stark left with graduates of Wilkes College last night at the ninth annual commencement at the college gymnasium.

Admiral Stark, Wilkes-Barre native, Wilkes trustee and former Chief of Naval Operations, was the principal speaker at the graduation exercises at which 187 students received bachelor's degrees.

Them of his address "Wyoming Valley, Past, Present and Future" was employed in a manner to show the graduates they must have vision, courage and faith if they are to succeed in the lives ahead.

ADM. HAROLD STARK

Using Greater Wilkes-Barre area's struggle for economic rehabilitation as an example, the retired naval figure cited reasons why education plays such a tremendous part in the success of lives, nations and the world.

He said, "We, in our generation in America, are living on brains, educated brains. The next and the following generations will enjoy even greater prosperity and abundance because of the education our colleges and universities are giving."

He called increasing research "the seed-corn of America's future economy." Admiral Stark continued, by asking, "Who is doing all this research? Who are these men and women whose brains are creating tomorrow's industry? They are the college boys and girls of yesterday."

But he warned that in spite of all our strides, we are still like children paddling along the shore of a great ocean of knowledge. "More and more must be trained by our colleges and some day we will inherit the well-being which God intended for His children on earth."

In discussing the history of Wyoming Valley directly, Admiral Stark pointed to the strides being made here today. He used figures to back his statement "that our community leaders are succeeding in their attempt to create a new economic base upon which to build the future."

"Quietly and without fanfare," he opined, "this community is being changed from a mining to an industrial center." He further pointed out the success thus far in the area's drive to get back on its feet shows plainly "what men and women of this area can do if everybody puts his shoulder to the grindstone." Then he lauded the Chamber of Commerce, Industrial Fund, Wilkes College and all other agencies which have worked toward a common goal.

"Like a ship, we all go down together," he warned and added, "In the Navy its what we call an 'all hands' job."

Admiral Stark outlined four points which the job requires:

"Encourage research that will develop new uses for our greatest natural resources—coal. Develop a plan of cooperation for existing industries to assure their continued success and growth. Create conditions that will attract new industries. Cultivate a high morale and community

Principal Speaker
At Commencement**

"Today well-lived makes every yesterday a dream of happiness and every tomorrow a vision of hope" were the words by Admiral Harold R. Stark left with graduates of Wilkes College last night at the ninth annual commencement at the college gymnasium.

Admiral Stark, Wilkes-Barre native, Wilkes trustee and former Chief of Naval Operations, was the principal speaker at the graduation exercises at which 187 students received bachelor's degrees.

Them of his address "Wyoming Valley, Past, Present and Future" was employed in a manner to show the graduates they must have vision, courage and faith if they are to succeed in the lives ahead.

ADM. HAROLD STARK

Using Greater Wilkes-Barre area's struggle for economic rehabilitation as an example, the retired naval figure cited reasons why education plays such a tremendous part in the success of lives, nations and the world.

He said, "We, in our generation in America, are living on brains, educated brains. The next and the following generations will enjoy even greater prosperity and abundance because of the education our colleges and universities are giving."

He called increasing research "the seed-corn of America's future economy." Admiral Stark continued, by asking, "Who is doing all this research? Who are these men and women whose brains are creating tomorrow's industry? They are the college boys and girls of yesterday."

But he warned that in spite of all our strides, we are still like children paddling along the shore of a great ocean of knowledge. "More and more must be trained by our colleges and some day we will inherit the well-being which God intended for His children on earth."

In discussing the history of Wyoming Valley directly, Admiral Stark pointed to the strides being made here today. He used figures to back his statement "that our community leaders are succeeding in their attempt to create a new economic base upon which to build the future."

"Quietly and without fanfare," he opined, "this community is being changed from a mining to an industrial center." He further pointed out the success thus far in the area's drive to get back on its feet shows plainly "what men and women of this area can do if everybody puts his shoulder to the grindstone." Then he lauded the Chamber of Commerce, Industrial Fund, Wilkes College and all other agencies which have worked toward a common goal.

"Like a ship, we all go down together," he warned and added, "In the Navy it's what we call an 'all hands' job."

Admiral Stark outlined four points which the job requires:

"Encourage research that will develop new uses for our greatest natural resources—coal. Develop a plan of cooperation for existing industries to assure their continued success and growth. Create conditions that will attract new industries. Cultivate a high morale and community spirit through the support of our schools and colleges, our churches and social agencies and our cultural groups."

"It requires vision, courage, faith, intelligent planning, leadership, and community determination to get on with the job and see it through," he said.

The speaker congratulated

(See STARK on Back Page)

Procession of administration, faculty and graduates of 1956 at Wilkes College began slowly to make its way from the main Wilkes campus to the college gymnasium a block away promptly at 7:50 last night to arrive at the gym promptly at 8. Heading the traditional procession is Dr. Charles B. Reif, chairman of the biology department, while members of the

administration and faculty follow in that order, in turn followed by 170 graduates who received degrees in person last night.

The seniors heard an address by Admiral Harold R. Stark and were graduated before an overflow crowd of parents and friends.

(Photos By Dan Gavlus)

Dr. Eugene S. Farley, president of Wilkes College, sinks a pick into the ground signifying the start of work on the Harold Stark Science Hall named in honor of Admiral Harold R. Stark, city native and naval figure.

The ground-breaking ceremonies took place yesterday afternoon. Shown left to right in the actual ground-breaking are Reuben H. Levy, Andrew J. Sordani, Jr., Dr. Farley, Admiral Stark, and Gilbert S. McClintock, chairman of the board of trustees of the college.

Admiral Stark stated at the ceremonies "My heart has always been here in Wyoming Valley." He and the college received several congratulatory messages, among them a telegram from President Eisenhower, for the occasion.

DAILY THOUGHT

Let us not burden our remembrances with a heaviness that's gone.—
Shakespeare

Social Security Growth

Expansion of Social Security has been phenomenal. The Commerce Clearing House reported on May 22 that benefits had risen almost 80-fold during the last 15 years. They are now running \$415 million a month and are expected to increase astronomically as more workers retire and as the Social Security Act is further liberalized by Congress.

Scheduled for discussion at Washington today, Wednesday and Thursday at a Federal-state conference on problems of older persons are bills to create a permanent Bureau of Older Persons in the Federal government, now pending in both houses of Congress. The conference is expected to endorse the bill. Even as the conference meets, the Senate is expected to take up the House-passed Social Security Act amendments offering additional benefits to the aged.

In the background is posed for Congress and the public the question of practical limits of Social Security. The measure now pending in the upper house to expand benefits is less liberal than the one passed by the lower body last year, but amendments to make it more liberal will be offered from the floor.

The Finance Committee's revision of the House-passed bill would limit the lower retirement age to widows and would abandon a House provision to make permanently disabled workers eligible for Social Security benefits at age 50. Lowering the retirement age for women to 62, as provided in the House bill, is opposed by Marion H. Folsom, Secretary of the Department of Health, Education and Welfare, who told the Senate Finance Committee in March that women are living and working longer than ever before. The lower retirement age, Folsom said, would go against current trends; more emphasis should be placed on rehabilitation and re-employment.

Commemorative P

Heads of some of the Latin American republics have been shown hesitation about attending the Inter-American Organization of American States council at Panama City June 10. The council promises to write an important chapter in the long and dramatic history of Pan-America.

When President Eisenhower's heads of Latin American republics gather at the meeting, the commemorating the 130th anniversary of the Congress of Panama 1826 by Simon Bolivar.

The 21-nation OAS council will hold its first session at exactly 11 a.m. June 22. That was when the Congress of Panama began in 1826. Each day a head of state or government will speak at sessions and June 23. On Sunday June 24, the council will meet for the first time since 1826.

Tito And Military Aid

Inevitably, in the light of the visit of President Marshal Tito of Yugoslavia to Moscow, the United States will consider whether military aid to Tito should be discontinued. The prospect is heightened by the circumstance that the House Foreign Affairs Committee is presently considering the foreign aid authorization bill and has already approved heavy slashes.

Representative John M. Vorys, Republican, of Ohio, predicted this week that Tito's statements in Moscow will lead to strong attempts in the House to cut Yugoslavia entirely out of the bill. This statement followed reports from Moscow quoting Tito as saying the Communist nations will never again be split as they were when the Kremlin thrust Tito aside in 1948.

How much window dressing there is by both sides, with Tito having waited for a year to return the call paid on him by Bulganin and Khrushchev, is a fair question. When they came to Belgrade Airport at the end of May in 1955, Tito then seemed none too happy about the visit. While he went to the airport to greet the visitors, he made no reply to a fulsome speech launched by Khrushchev.

In the succeeding year the new Soviet leaders by many sensational moves and statements repudiated Stalin's one-man rule and gave other evidences of a change of heart in party councils. Now as Tito receives an apparently cordial welcome, the campaign by Communist Party Chief Khrushchev against Stalin's policies is redoubled through the release of a complete text of a secret speech made by the Russian chief debunking Stalin as a man afraid, capricious, irritable, brutal and responsible for murders and tortures.

A leading question today is whether Tito will succumb to Soviet blandishment on this visit to Russia or whether in essence he will maintain Yugoslavia's unique position of a Communist neutral between Soviet Russia and the West. Hinged on this more than on anything else is the question of United States aid to Yugoslavia.

Dim Star Ahead

The first artificial earth satellite will appear in the sky as a fast-moving, sixth magnitude star, barely visible to the naked eye but easily seen with ordinary field glasses under the right conditions.

These calculations were made by a Navy scientist, Dr. Homer Newell, on the basis of the Pentagon's announcement that the first man-made "moon" will be a bright metallic sphere 20 1/2 inches in diameter.

Newell explained that information is now sufficient for exact calculation of the amount of light the object will shed on earth. In order to be as bright as a first magnitude star, it would have to be 16 feet in diameter.

--AND THEN THE FUN BEGINS

The Once Over

By H. I. PHILLIPS

White House Conversation Piece

President.—Well, what's the cold war situation this morning?

Aide.—It's still complicated by the fact we just got another invitation from Russia.

President.—That's the third show of extreme politeness this month. It looks like Moscow is waging an all-out invitation battle. What do you think of the American defense against it?

Aide.—I feel our public warning system needs to be changed . . . maybe three long blasts whenever Bulganin and Khrushchev launch a new "hospitality-rocket," and two blasts to denote all clear when they turn back to their denunciatory routine.

President.—The most dangerous Russian weapon may be "the guided epistle." There are indications America is being overinvited in this mood of transcontinental affability. First Moscow asked us to send our top airmen to review the Russian air fleet. Next they suggest an exchange visit of battleships. What's it all mean?

Aide.—You know what Churchill said about an enigma wrapped in a riddle.

President.—What complicates matters is that this enigma and riddle are wrapped in an RSVP.

Aide.—We've accepted the invitation to the Kremlin air show. But I still think the picture of American notables traipsing to Moscow like visiting firemen and brother Elks is confusing to the neutral world.

President.—It plays into the hands of the Soviets as they offset the long record of low punches by presenting a picture of high respectability, with our help.

Aide.—We've got to get accustomed, perhaps, to abuse and hostility one minute and sweetness and light the next. It's amazing how easily Moscow can switch from Lenin and Marx to Emily Post and her Book of Etiquette.
